Frameworks

CJM, Blueprint, JTBD, Prototyping, UI testings, User journey, Road map

Sectors

Banking & Fintech, Aviation, Business Automation, SaaS, Delivery & E-commerce

Skills

Building a full-cycle design process

- During the year of working at the bank, I built the process of supplying proven design solutions for the 10 product teams, hiring designers, built cross-department cooperation
- Reduced growing 10-month design debt in the Bank, increasing the number of designers from 3 to 12, and providing consistency by creating a Design System, onboarding tools, digital bank principles, and synchronization meetings
- Managed ever-changing requirements for an external stakeholder, provided proven design solution delivery through backlog prioritization

Research and metrics

- For a foreign customer who did not have a research budget, I defined the product vision for the UAE market, using reports of Hofstede Insights about UAE local customs and benchmarks of Arab countries' platforms
- Increased Customer Satisfaction Index by 18% by analyzing feedback in stores and composing a backlog of improvements in the Bank application
- Identified the factors that lead people to choose a credit card by organizing an observational research
- Cut dashboard learnability time by 11% by designing a new flow, based on beginner and experienced user insights for the CRM
- Reduced the number of user mistakes by 28% by designing 40+ flows within a single transport dispatcher dashboard with sequential processes
- Launched innovative refinancing, and loan market products, studied the users' needs, achieved the goal numbers of services purchased, the depth of products using and Average Revenue Per User
- Designed secure user flow for a Bank that saved \$0.05 per login, analyzing the error rates
